

How to turn off UPnP for the Sky Broadband Router

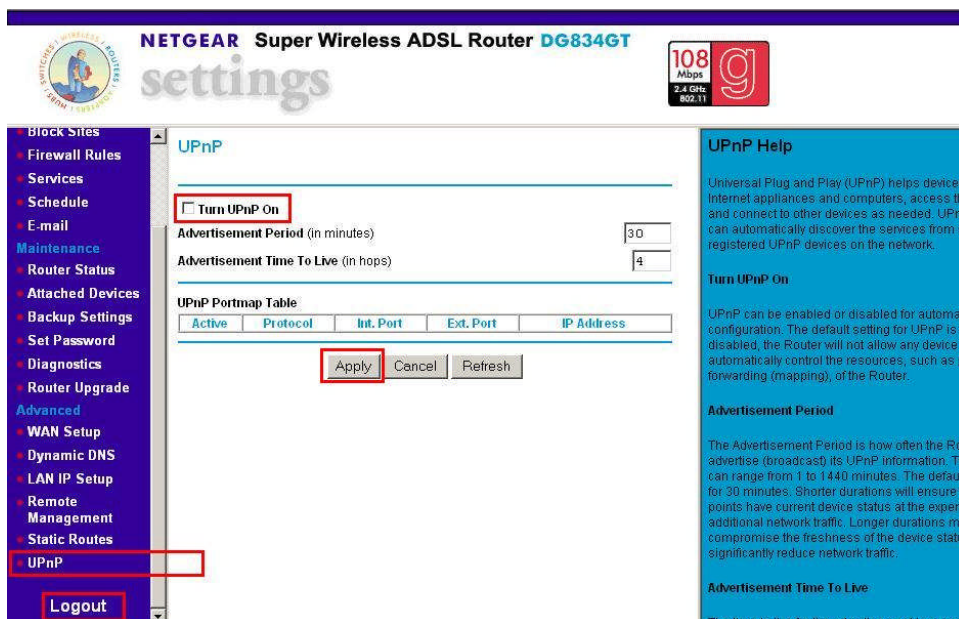

1. On a PC that is connected to your Sky broadband, enter the address <http://192.168.0.1> into the address bar:

2. You will then be prompted for a username and password – enter **admin** as the username and **sky** as the password (both lower-case):

3. You will then see the router configuration pages – please scroll down to the bottom options of the list in the left-hand pane, click on **UPnP** and untick **Turn UPnP On**:

4. Click on the **Apply** button and then click on **Logout** at the bottom of the left-hand pane. Power the router off and then back on again.
